

Environmental Testing

*Your
Source for
Test and
Analysis*

INDEPENDENT TESTING

Whether you need minimum integrity testing to assure your customer that your product can handle transport to the marketplace, or full-blown Multi-Environment Over Stress Tests (MEOST), Highly Accelerated Life Test (HALT) or Highly Accelerated Stress Screen (HASS) development programs...WE CAN HELP! MTL can simulate a wide variety of environments in order to test your products under extreme conditions. The various stresses applied stimulate defects allowing them to be discovered and corrected at the earliest stages of the design process. Ultimately, this will lead to:

- Lower warranty costs
- Improved customer loyalty
- Reduced time to market
- Reduced product qualification costs

Front Page: In the foreground is a large capacity combined environment system which can provide simultaneous vibration, temperature and humidity conditions. In the background is a smaller system, which can also simulate altitude. **Right:** Our UD T-1000 vibration system utilizing the slip table. **Lower (Middle)** The T-1000 system upright being loaded to perform a resonance search in MIL-STD-167 vibration. **Lower (Far Bottom)** Our facility.

Our 17,400 sq. ft. laboratory has over \$6.6 M in state-of-the-art equipment ready to solve your problems!
